## Quiz 2

Wed Sep 30

You have up to 20 minutes. You may use a standard calculator if necessary, but no text book or notes.

1. (5 points) Below is a tree representing a variable-width encoding of 9 letters. Use it to:

- decode the bits 10011111010011010 into a word: $\qquad$
- encode the word WITH as bits: $\qquad$

Figure 1:
2. ( 5 points) Decode the following $8 \times 8$ image indicated by the hexadecimal number along the right side, which uses 1 bit per pixel.

Figure 2:
3. (5 points) If an image uses 9 bits for each pixel, what is the maximum number of distinct colors it can contain?
4. (5 points) Draw a tree representing a variable-width encoding of the four letters A, $\mathbf{L}, \mathbf{N}$, and T. Use it to encode the word ATLANTA. The fixed-width tree (below) uses exactly 2 bits per character, so encoding ATLANTA requires 14 bits. How many bits does your tree need to encode ATLANTA?

Figure 3: A fixed-width encoding of four letters.
