

Polyalphabetic substitution — Vigenère

Monday 8 December 2008

In an attempt to conceal the character frequencies that are the downfall of a monoalphabetic substitution, the Vigenère technique (1553) switches the alphabet used on each letter, according to a secret keyword. We start with a table of shifted alphabets:

	a b c d e f g h i j k l m n o p q r s t u v w x y z
a	a b c d e f g h i j k l m n o p q r s t u v w x y z
b	b c d e f g h i j k l m n o p q r s t u v w x y z a
c	c d e f g h i j k l m n o p q r s t u v w x y z a b
d	d e f g h i j k l m n o p q r s t u v w x y z a b c
e	e f g h i j k l m n o p q r s t u v w x y z a b c d
f	f g h i j k l m n o p q r s t u v w x y z a b c d e
g	g h i j k l m n o p q r s t u v w x y z a b c d e f
h	h i j k l m n o p q r s t u v w x y z a b c d e f g
i	i j k l m n o p q r s t u v w x y z a b c d e f g h
j	j k l m n o p q r s t u v w x y z a b c d e f g h i
k	k l m n o p q r s t u v w x y z a b c d e f g h i j
l	l m n o p q r s t u v w x y z a b c d e f g h i j k
m	m n o p q r s t u v w x y z a b c d e f g h i j k l
n	n o p q r s t u v w x y z a b c d e f g h i j k l m
o	o p q r s t u v w x y z a b c d e f g h i j k l m n
p	p q r s t u v w x y z a b c d e f g h i j k l m n o
q	q r s t u v w x y z a b c d e f g h i j k l m n o p
r	r s t u v w x y z a b c d e f g h i j k l m n o p q
s	s t u v w x y z a b c d e f g h i j k l m n o p q r
t	t u v w x y z a b c d e f g h i j k l m n o p q r s
u	u v w x y z a b c d e f g h i j k l m n o p q r s t
v	v w x y z a b c d e f g h i j k l m n o p q r s t u
w	w x y z a b c d e f g h i j k l m n o p q r s t u v
x	x y z a b c d e f g h i j k l m n o p q r s t u v w
y	y z a b c d e f g h i j k l m n o p q r s t u v w x
z	z a b c d e f g h i j k l m n o p q r s t u v w x y

Now, let's encode the message "attack at dawn" using the keyword 'lemon'. We start by repeating the keyword underneath the message, so the letters line up:

message:	a	t	t	a	c	k	a	t	d	a	w	n
key:	l	e	m	o	n	l	e	m	o	n	l	e
encrypted:	l	x	f	o								

Now, look for the row marked 'a' in the left-most column, and the 'l' in the top-most row. The intersection of that column and row contains 'l'. Repeat for the rest: the intersection of row 't' and column 'e' is 'x'.
