

Figure 1: An 8×8 character-cell font ([zoom in](#))

Assignment 2 – hex images

due at 23:59 on Tue Oct 2 (60 points)

For this assignment, you will use my [hexadecimal image workshop](#). Basically, you type hexadecimal numbers into the three boxes to control the red, green, and blue images that are then merged together to form the final image. You can change the size of the canvas using the drop-downs. You have two tasks:

1. Write your two initials using this 8×8 character-cell font. Each initial should be in a different **secondary** color (cyan, magenta, or yellow).

As examples, here are:

- [my initials in magenta and yellow](#)
- [The characters /* in yellow and cyan](#)

2. Be creative and design any icon, logo, or character you wish. Here are a few examples from previous students:

- [Mario](#) in 12×16
- [French flag](#) in 12×8
- a **very** impressive [Bob Marley](#) in 40×40
- a cute [race car](#)

To **save** your images, right-click the **Link** button on the workshop page, **Copy Link Address**, and paste it into a document or your email.

To **submit** your images, use [this form](#) and paste the link addresses for each task.
