Quiz 6

Wed Apr 26

1. Which of the following password schemes is the more secure authentication mechanism? Explain why and provide evidence.

    (a) A 5-digit PIN (digits 0–9 only).

    (b) A 3-character password consisting of lower-case letters and digits.

2. Explain how some web sites approximate *two-factor authentication* when you log in. Which categories of authentication are they using?
