

Assignment 2 – HTML/CSS

due at 23:59 on Thu Feb 19 (100 points)

This assignment begins with [check-in 3](#). You were to sketch a mock-up of a grid-based web page, and start a basic Bootstrap project called `assn2-page`.

For this assignment, you are to implement your sketch using the row and column classes in Bootstrap. Get creative and add logos, buttons, images, and whatever text you want. Try to make it look clean and attractive.

The links on your site do not need to work, and the text can be “lorem ipsum” (fake).

With everything saved in your WebStorm `assn2-page` project, within your `cs120` folder, remember to commit and push to GitLab.
