

# Assignment 2 – Jekyll

due at 23:59 on Mon Feb 20 (100 points)

For this assignment, you will design and implement a web site using the [Jekyll](#) static site generator.

- Write the contents for at least 3 posts or pages using Markdown notation.
- Edit one or more of the `_layout` or `_include` files to change the look of the site, so it doesn't look exactly like the default Jekyll design.

Create your site as a sub-folder `assn2` of your git-linked directory, so it's easy to add/commit/pull/push to submit.
