

# Assignment 6 – Django

due at 23:59 on Wed May 3 (100 points)

For this assignment, we will use the [Django](#) web framework.

To get started, please begin working through the [Polls application tutorial](#).

Here is a repository that I've used, that contains the completed Polls application:

[https://github.com/garmoncheg/django-polls\\_1.10](https://github.com/garmoncheg/django-polls_1.10)

And here are some possible ways you could try to extend the Polls application:

- Make the polls detail and results page contain a link back to the list of polls.
- On the results page, sort the polls by number of votes.
- On the poll detail (voting) page, randomize the order of the choices.
- On the results page, in addition to writing the number of votes, include a bar graph or pie chart.
