

# Project 4: Google maps

For this assignment, your code should be in a folder called precisely p4map.

I’d like you to design an interactive page with a Google map. The theme can be whatever you like, but something like “My neighborhood,” or “My travels” would be appropriate.

It should use some web form or navigation widgets (buttons, pills, drop-downs, check-boxes) to manipulate features of the map. Also, the map should contain two or more markers that have some effect on the page when clicked.

See a demonstration of my solution in this short video.<sup>1</sup> [2m 13s] (The video says “Assignment 3,” but this time it’s for Project 4.)
