

Project 5: REST

2019-05-06 22:54
1a0f14a

Using the REST demonstration files¹ from April 3rd and the REST notes, add a new resource and schema for something like books or music. Code your schema into `server/settings.py` using the Python Eve validation notation. Your resource should add 4–5 fields (in addition to the auto-generated `_id` and `_etag`).

Run the server and test all the CRUD operations by writing `curl` command lines. Document the successful commands into a `README.md`.
