

Project 6: CRUD app

2019-05-06 22:54
1a0f14a

For this project, please continue the CRUD app that we created in class (code on gitlab under `rest` subdir of `cs120pub`). Our code could handle create, retrieve, update, and delete of a `people` entry with just **one** name field. You can stick with `people` or do something like `books` or `music`, but the major extension you should strive for is that it supports more than one field!

Also, it should be offer reasonable feedback in the UI when an insert or update fails due to invalid field values.
