

Assignment 6 solution

See [the video](#).

1. $\text{Unify}(\text{real} \rightarrow t_4, t_5 \rightarrow (\text{string} \rightarrow \text{int}))$

- Both arrow types, unify left/right sides
- $\text{Unify}(\text{real}, t_5)$
 - $\{t_5 = \text{real}\}$
- $\text{Unify}(t_4, \text{string} \rightarrow \text{int})$
 - $\{t_4 = \text{string} \rightarrow \text{int}\}$
- $\text{real} \rightarrow \text{string} \rightarrow \text{int}$

2. $\text{Unify}(t_1 \rightarrow (t_2 \rightarrow \text{real}), \text{int} \rightarrow (t_3 \text{ list} \rightarrow \text{real}))$

- Both arrow types, unify left/right sides
- $\text{Unify}(t_1, \text{int}) \quad \{t_1 = \text{int}\}$
- $\text{Unify}(t_2 \rightarrow \text{real}, t_3 \text{ list} \rightarrow \text{real})$
 - Both arrow types
 - $\text{Unify}(t_2, t_3 \text{ list}) \quad \{t_2 = t_3 \text{ list}\}$
 - $\text{Unify}(\text{real}, \text{real}) \quad \text{SUCCEEDS}$
 - $\text{int} \rightarrow t_3 \text{ list} \rightarrow \text{real}$

3. $\text{Unify}((\text{int list}) \text{ list}, t_6 \text{ list})$

- Both application/ID types, both are list
- $\text{Unify}(\text{int list}, t_6) \quad \{t_6 = \text{int list}\}$
- int list list

4. $\text{Unify}((t_7 \text{ list} * t_8) * t_8, (t_9 * t_{10} \text{ list}) * t_9)$

- Both cross types, unify left/right
- $\text{Unify}(t_7 \text{ list} * t_8, t_9 * t_{10} \text{ list})$
- $\text{Unify}(t_8, t_9) \quad \{t_8=t_9\}$
- $\text{Unify}(t_7 \text{ list} * t_9, t_9 * t_{10} \text{ list})$
 - Both cross types, unify left/right
 - $\text{Unify}(t_7 \text{ list}, t_9) \quad \{t_9 = t_7 \text{ list}\}$
 - $\text{Unify}(t_9, t_{10} \text{ list})$
 - $\text{Unify}(t_7 \text{ list}, t_{10} \text{ list}) \quad \{t_7 = t_{10}\}$
- $t_{10} \text{ list} * t_{10} \text{ list} * t_{10} \text{ list}$

```
fun crow xs =
  if null xs then 1
  else hd xs * crow (tl xs)
```

```
crow : t20 -> t21
xs : t20
null : t8 list -> bool
Unify(t20, t8 list) { t20 = t8 list }
```

```
crow : t8 list -> t21
xs : t8 list
Unify(t21, Int)
```

```
crow : t8 list -> int
hd: t9 list -> t9
hd xs: {t9=t8} t8
op* {t8=int}
```

```
crow : int list -> int
```

```
fun down x = if x=0 then [] else x :: down (x-1)
```

```
down: t30 -> t31
x : t30
x=0 therefore {t30=int}
down: int -> t31
x : int
[] : t11 list {t31 = t11 list}
```

```
down: int -> t11 list
op:: t12 * t12 list -> t12 list
op::(x, down(x-1)) {t12 = int}
op::(x, down(x-1)) :: int list
Unify(t11 list, int list) {t11=in}
```

```
down: int -> int list
```

```
fun edgar n = crow (down n)
```

```
edgar : t40 -> t41
n : t40
```

```
down : int -> int list
down n {t40=int}
down n : int list
crow : int list -> int
unify(int list, int list) succeeds
unify(t41, int) {t41 = int}

edgar : int -> int
```
